Bank.Green

- a project to restrict financing of fossil fuels
- built team, wrote blog posts
- contributed to UX flow and branding decisions
- gathered and extracted bank data
<https://bank.green>

End to End Monitoring

- a project to monitor TB level data collection, processing, and comms
- installed counters in key functions
- created, configured systems generating Datadog monitors, dashboards
- 40% reduction in engineering and operations toil

Zelda (Systems Migration)

- migration of live data collection, auth, and cleaning systems
- managed team building and modifying data ingestion systems
- built migration validation scripts
- migrated 100's of systems

Transcript Transcription

- web app ingesting contorted transcript images and exporting structured data
- wrote service for image deskewing
- created services for text id & extraction
- contributed to frontend

Ocean Shipping Predictions

- web API predicting cargo vessels' next ports of call and arrival times
- engineered, interpolated, cleaned data, prototyping and implementing algorithms
- wrote backend server
- various techniques: sequence generators, DNN's, Markov chains, auto ML ensembles

Comic Science (Organizing)

- scientists and designers accessibly communicating environmental crisis
- founder and organizer
- built project-based coalitions
- recruited team members
